To Whom It May Concern,

I have read through the issue papers and I have one comment/question, at this time, regarding Issue Paper 3: Base and Compliance Daily Per Capita Use:

- 1) North Marin Water District operates two different service areas that have separate sources of supply and separate distribution systems. Under issue paper 3, can methodology be developed to join two different service areas, with different sources of supply and distribution systems under one, to create the Base and Compliance Daily Per Capita Use (by combining the populations and grow water use)?

Thanks,  
Ryan Grisso
